

The Industry Standard for Maintenance Tracking

CAMP HIGHLIGHTS

Electronic Logbooks (E-Logs)

CAMP will scan and make searchable your entire logbook including airframe, engines and APU. Our logs are indexed chronologically and allow you to search for any item, even if the entry was handwritten. The value of this service is \$1,250.00 and CAMP will provide it to you free of charge.

CAMP E-Logs are extremely invaluable during the sale of an aircraft. If review of your logs is required, your logbooks can be sent electronically – saving the buyer travel costs and increasing your chances of a sale. Furthermore, if something were to happen to the original logbooks (loss or damage), CAMP has the electronic archives on file for you.

CAMP Can Save You Time and Money

We track over 2500 items, more than anyone else in the industry. This ensures that you will not miss a critical item that could mean expensive down time for you and your aircraft. Text and documentation are provided with work cards (work compliance forms), hence eliminating time spent researching manufacturer maintenance documentation for proper procedures.

Aircraft Value

Everyone knows resale value is contingent upon maintenance history. CAMP provides the documentation you need to show a prospective buyer. We let you know what maintenance has been complied with and what maintenance is coming due. When using CAMP to track your maintenance, the risk of overlooked or “hidden” maintenance issues is removed from the equation. This results in higher resale value and a more marketable aircraft.

Data Archiving

CAMP will scan and archive your sign off cards; 8130 tags, wiring diagrams, borescope inspections, etc.

Full CAMP Analyst Support

CAMP analysts are responsible for updating all of your Service Bulletins, Airworthiness Directives and Revisions in a timely manner. Your analyst is your direct go-to person, serving as an extension of your maintenance department. Additionally, he/she is responsible for the updating of all signed-off maintenance events sent into CAMP. Furthermore, CAMP has instituted a 24-Hour turnaround time for the updating of signed-off maintenance events sent in to CAMP.

Direct References

CAMP utilizes the Chapter 5 Maintenance Manuals in our application; tracking and applying revisions and advisories to your maintenance schedule as issued by the manufacturer and regulatory agencies.

CAMP Product Investment

CAMP invests approximately \$3 million annually into technology enhancements to our product, making certain that we stay ahead of the competition and provide the finest quality service available.

System Training

User seminars are held worldwide in hundreds of locations. Web based training is also available. All training is free of charge.

Data Entry & Q.C.

CAMP offers 24-48 hour turnaround of data input and QC. Compliance records can be sent in via toll free fax line.

Fleet Capabilities

CAMP offers true mixed fleet capabilities. We have all major makes and models on one system, providing you the ability to view your complete fleet on one screen.
