

The Blackhawk Advantage

Blackhawk Modifications Inc. reigns as the leading provider of engine upgrades for the turboprop market. With over 200 upgrades on record, a multitude of reasons have fueled the success of Blackhawk, including performance and value.

Your Options

Blackhawk continues to prove itself as the best answer to the common question of overhaul vs. upgrade.

The Sunk Cost of Overhaul

Barring any unforeseen problems, an overhaul may appear the traditional solution. The engines will be reworked to acceptable tolerances. The initial estimate seems relatively reasonable. Unfortunately, experience has shown, once overhaul begins several hidden factors may come into play leaving the owner with more costs than expected and ultimately a huge investment with no change in performance. These factors include: Engine problems not revealed until overhaul begins, loaner engines needed while engines are overhauled, down time of the airplane while engines are reinstalled, installation costs, part costs and commission to the shop. Financially, these factors expose the sunk costs which always accompany overhaul.

The Benefit of Blackhawk Upgrades

Blackhawk offers a new approach to overhaul. Cost effectiveness supports the decision to invest in the Blackhawk engine upgrades. Not only does the speed and power of the new engines impress upon the owner the benefit of choosing Blackhawk, but the savings found from the reduced operating costs

exemplify the true advantage. The growing number of Blackhawk owners stalwartly endorses their decision to upgrade.

Performance & Value

Blackhawk aircraft have a new lease on life from the amplified horsepower. Owners revere the increased true airspeed and faster time to climb while enjoying lower operating costs. Blackhawk incorporates the most recent

and satisfying performance standards of new aircraft models to the customer's existing aircraft. Blackhawk owners enjoy the benefit of heightened performance while maintaining the comfort of their current aircraft. Superior resale value is added upon upgrade completion ensuring the new Blackhawk owner will recuperate the initial investment upon resale.
